# STATEMENT BY DIRECTORS For the year ended 31 December 2017

We, being two directors of QBE Insurance (Australia) Limited, certify that the Statement of Comprehensive Income, Balance Sheet, Statement of Changes in Balances Due To Head Office, Statement of Cash Flows and notes set out on pages 4 to 40 fairly present the Financial Statements of the New Zealand Branch of the Company for the year ended 31 December 2017.

The Board of Directors of QBE Insurance (Australia) Limited authorised these statements for issue on the 15th day of February 2018.

DIRECTOR:

DIRECTOR:

# Independent auditor's report

To the Directors of QBE Insurance (Australia) Limited

QBE Insurance (Australia) Limited New Zealand Branch's financial statements comprise:

- the balance sheet as at 31 December 2017;
- the statement of comprehensive income for the year then ended;
- the statement of changes in balances due to head office for the year then ended;
- the statement of cash flows for the year then ended; and
- the notes to the financial statements, which include a summary of significant accounting policies.

### Our opinion

In our opinion, the financial statements of QBE Insurance (Australia) Limited New Zealand Branch (the Branch), present fairly, in all material respects, the financial position of the Branch as at 31 December 2017, its financial performance and its cash flows for the year then ended in accordance with New Zealand Equivalents to International Financial Reporting Standards (NZ IFRS) and International Financial Reporting Standards (IFRS).

### Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (New Zealand) (ISAs NZ) and International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the financial statements* section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

We are independent of the Branch in accordance with Professional and Ethical Standard 1 (Revised) Code of Ethics for Assurance Practitioners (PES 1) issued by the New Zealand Auditing and Assurance Standards Board and the International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants (IESBA Code), and we have fulfilled our other ethical responsibilities in accordance with these requirements.

Our firm carries out other services for the Branch in the areas of tax compliance and advisory services. The provision of these other services has not impaired our independence as auditor of the Branch.

### Information other than the financial statements and auditor's report

The Directors are responsible for the other information. Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion on the other information. At the time of our audit, the Directors have advised that no other information will be included with the financial statements.

In connection with our audit of the financial statements, if other information is included, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed on the other information that we obtained prior to the date of our auditor's report, we conclude that there is a material misstatement of this other information, we are required to report that fact.

### Responsibilities of the Directors for the financial statements

The Directors are responsible, on behalf of the Branch, for the preparation and fair presentation of the financial statements in accordance with NZ IFRS and IFRS, and for such internal control as the Directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Directors are responsible for assessing the Branch's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Directors either intend to liquidate the Branch or to cease operations, or have no realistic alternative but to do so.

### Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements, as a whole, are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs NZ and ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

A further description of our responsibilities for the audit of the financial statements is located at the External Reporting Board's website at:

https://www.xrb.govt.nz/standards-for-assurance-practitioners/auditors-responsibilities/audit-report-6/

This description forms part of our auditor's report.

### Who we report to

This report is made solely to the Directors of QBE Insurance (Australia) Limited, as a body. Our audit work has been undertaken so that we might state those matters which we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Branch and the Directors of QBE Insurance (Australia) Limited, as a body, for our audit work, for this report or for the opinions we have formed.

The engagement partner on the audit resulting in this independent auditor's report is Lisa Crooke.

### NOTES TO THE FINANCIAL STATEMENTS For the year ended 31 December 2017

## GENERAL INFORMATION

QBE Insurance (Australia) Limited (referred to as the Parent or Head Office), is a company incorporated in Australia and operates in New Zealand as a branch (the Branch).

The Branch is an insurer providing general insurance services. It is based at 29 Customs Street West, Auckland.

The financial statements of the Branch are for the year ended 31 December 2017 and were authorised for issue by the directors on the 15<sup>th</sup> day of February 2018.

The Branch's owners do not have the power to amend these financial statements once issued.

# 2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The principal accounting policies adopted in the preparation of the financial statements are set out below. These policies have been consistently applied to all the years presented, unless otherwise stated.

### (A) Basis of preparation

The financial statements have been prepared in accordance with New Zealand Generally Accepted Accounting Practice (NZ GAAP). They comply with New Zealand Equivalents to International Financial Reporting Standards (NZ IFRS) and other applicable financial reporting standards, as appropriate for for-profit entities. The Branch is a for-profit entity registered under the Companies Act 1993. The financial statements are prepared in accordance with the requirements of Part 7 of the Financial Markets Conduct Act 2013.

The financial statements of the Branch comply with International Financial Reporting Standards (IFRS).

The Branch is an FMC reporting entity under Part 7 of the Financial Markets Conduct Act 2013 and it is a Licenced Insurer under the Insurance (Prudential Supervision) Act 2010.

### Historical cost convention

These financial statements have been prepared under the historical cost convention, as modified by certain exceptions noted in the financial statements, with the principal exceptions being the measurement of financial assets at fair value and the measurement of the outstanding claims liability and related reinsurance and other recoveries at present value.

The preparation of the financial statements requires the use of certain critical accounting estimates. It also requires management to exercise judgement in the process of applying the Branch's accounting policies. The areas involving a higher degree of judgement or complexity, or areas where assumptions or estimates are significant, are disclosed in note 4.

#### (B) Unearned premium

Unearned premium is calculated based on the term of the risk and in accordance with the expected pattern of the incidence of risks underwritten, using the daily pro-rata method or the 24ths method.

At each balance sheet date, the adequacy of the unearned premium liability is assessed on a net of reinsurance basis against the present value of the expected future cash flows relating to potential future claims in respect of the relevant insurance contracts, plus an additional risk margin to reflect the inherent uncertainty of the central estimate. If the present value of the expected future cash flows relating to future claims plus the additional risk margin exceeds the unearned premium liability less related intangible assets and related deferred acquisition costs, then the unearned premium liability is deemed to be deficient. The resulting deficiency is recognised immediately in profit or loss.

#### NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

## 2. Summary of Significant Accounting Policies (Continued)

#### (C) Premium revenue

Premium comprises amounts charged to policyholders, excluding taxes collected on behalf of third parties. The earned portion of premium received and receivable, including unclosed business, is recognised as revenue. Premium on unclosed business is brought to account based upon the pattern of booking of renewals and new business.

#### (D) Outward reinsurance

Premium ceded to reinsurers is recognised as an expense from the attachment date over the period of indemnity of the reinsurance contract in accordance with the expected pattern of the incidence of risk. Accordingly, a portion of outward reinsurance premium is treated as deferred reinsurance premium at the balance sheet date.

#### (E) Claims

The provision for outstanding claims is measured as the central estimate of the present value of expected future claims payments plus a risk margin. The expected future payments include those in relation to claims reported but not yet paid; claims incurred but not reported (IBNR); claims incurred but not enough reported (IBNER); and estimated claims handling costs. Claims expense represents claim payments adjusted for the movement in the outstanding claims liability.

The expected future payments are discounted to present value using a risk-free rate.

A risk margin is applied to the central estimate, net of reinsurance and other recoveries, to reflect the inherent uncertainty in the central estimate.

#### (F) Reinsurance and other recoveries

Reinsurance and other recoveries on paid claims, reported claims not yet paid, IBNR and IBNER are recognised as revenue.

Amounts recoverable are assessed in a manner similar to the assessment of outstanding claims. Recoveries are measured as the present value of the expected future receipts, calculated on the same basis as the provision for outstanding claims.

### (G) Acquisition costs

Acquisition costs (which include commission costs) are the costs associated with obtaining and recording insurance contracts. Acquisition costs are capitalised when they relate to the acquisition of new business or the renewal of existing business and are referred to as deferred acquisition costs. These costs are amortised on the same basis as the earning pattern of the premium, over the period of the insurance contract to which they relate. At the balance sheet date, deferred acquisition costs represent the capitalised costs that relate to the unearned premium. Acquisition costs are deferred in recognition of their future benefit and are measured at the lower of cost and recoverable amount.

### (H) Investment income

Interest income is recognised in the period in which it is earned. Dividends are recognised when the right to receive payment is established. Investment income includes realised and unrealised gains or losses on financial assets which are reported on a combined basis as net fair value gains or losses on financial assets in the Statement of Comprehensive Income.

# NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

## 2. Summary of Significant Accounting Policies (Continued)

### (I) Taxation

The income tax expense for the year is the tax payable on the current year's taxable income, adjusted by changes in deferred tax assets and liabilities attributable to temporary differences between the tax bases of assets and liabilities and their carrying amounts in the financial statements.

Deferred tax is provided in full, using the liability method, on temporary differences between the tax bases of assets and liabilities and their carrying amounts in the financial statements.

Deferred tax assets and liabilities are recognised for temporary differences at the tax rate expected to apply when the assets are recovered or liabilities are settled. The relevant tax rates are applied to the cumulative amounts of deductible and taxable temporary differences to measure the deferred tax asset or liability. An exception is made for certain temporary differences arising from the initial recognition of an asset or liability. No deferred tax asset or liability is recognised in relation to these temporary differences if they arose in a transaction that is not a business combination and at the time did not affect either accounting profit or taxable loss.

Deferred tax assets are recognised for deductible temporary differences and unused tax losses only if it is probable that future taxable amounts will be available to utilise those temporary differences and losses.

Deferred tax assets and liabilities are offset when there is a legally enforceable right to offset current tax assets and liabilities. Current tax assets and liabilities are offset where the entity has a legally enforceable right to offset and intends either to settle on a net basis, or to realise the asset and settle the liability on a net basis, or to realise the asset and settle the liability simultaneously.

### (J) Cash and cash equivalents

Cash and cash equivalents includes cash at bank and on hand and deposits at call which are readily convertible to cash on hand and which are used for operational cash requirements.

#### (K) investments

Investments comprise interest-bearing assets. Investments are designated as at fair value through profit or loss on initial recognition. They are initially recorded at fair value, being the cost of acquisition excluding transaction costs, and are subsequently remeasured to fair value at each reporting date. The policy of management is to designate a group of financial assets or financial liabilities as at fair value through profit or loss when that group is both managed and its performance evaluated on a fair value basis for both internal and external reporting in accordance with the Branch's documented investment strategy.

Fixed and floating rate securities are valued using independently sourced valuations.

All purchases and sales of investments that require delivery of the asset within the time frame established by regulation or market convention ("regular way" transactions) are recognised at trade date, being the date on which the Branch commits to buy or sell the asset. Investments are derecognised when the right to receive future cash flows from the asset has expired or has been transferred and the Branch has transferred substantially all the risks and rewards of ownership.

### (L) Trade and other receivables

Trade and other receivables are recognised at amount receivable less a provision for impairment. A provision for impairment is established when there is objective evidence that the Branch will not be able to collect all amounts due according to the original term of the receivable. Any increase or decrease in the provision for impairment is recognised in profit or loss within underwriting expenses. When a receivable is uncollectible, it is written off against the provision for impairment account. Subsequent recoveries of amounts previously written off are credited against underwriting expenses in profit or loss.

#### NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

### 2. Summary of Significant Accounting Policies (Continued)

### (M) Property, plant and equipment

All property, plant and equipment is stated at historical cost less depreciation and impairment. Plant and equipment is depreciated using the diminishing value method over the estimated useful life of each class of asset. Estimated useful lives are between three and ten years.

Subsequent costs are included in the asset's carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Branch and the cost of the item can be measured reliably. All other repairs and maintenance are charged to the Statement of Comprehensive Income during the financial period in which they are incurred.

The assets residual values and useful lives are reviewed, and adjusted if appropriate, at the end of each reporting period.

An asset's carrying amount is written down to its recoverable amount if the asset's carrying amount is greater than its estimated recoverable amount.

Gains and losses on disposals are determined by comparing the proceeds with the carrying amount and are recognised within 'underwriting expenses' in the Statement of Comprehensive Income.

### (N) Impairment of assets

Assets that have an indefinite useful life are tested annually for impairment or more frequently when changes in circumstances indicate that the carrying amount may not be recoverable. Assets that are subject to amortisation are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is recognised as the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset's fair value less costs to sell and its value in use. For the purposes of assessing impairment, assets are grouped in cash generating units which are the lowest levels for which there are separately identifiable cash flows.

### (O) Trade and other payables

Trade and other payables are measured at cost and are settled under standard terms and conditions. Related party payables are measured at cost and are repayable on demand.

#### (P) Foreign currency

### (i) Functional and presentation currency

The Branch's financial statements are presented in New Zealand dollars, being the functional and presentation currency of the Branch.

### (ii) Translation of foreign currency transactions and balances

Foreign currency transactions are translated into New Zealand dollars at the spot rates of exchange applicable at the dates of the transactions. At the balance sheet date, monetary assets and liabilities denominated in foreign currencies are translated at the rates of exchange prevailing at that date. Resulting exchange gains and losses are included in profit or loss.

#### (iii) Hedging transactions

Derivatives may be used to hedge the foreign exchange risk relating to certain transactions.

## NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

### 2. Summary of Significant Accounting Policies (Continued)

### (Q) Employee benefits

#### (i) Superannuation

The Branch contributes to a privately administered pension plan on a mandatory, contractual or voluntary basis. The Branch has no obligation once the contributions have been paid. All contributions are recognised as an employee expense when they are due.

### (ii) Share based payment expense

The employees of the Branch participate in an equity settled share based compensation plan of QBE Insurance Group Limited. The fair value of the employee services received in exchange for the grant of those instruments is recognised as an expense.

#### (iii) Other

Liabilities for wages and salaries, including non-monetary benefits, annual leave, and accumulating sick leave expected to be settled within 12 months of the reporting date are recognised in other payables in respect of employees' services up to the reporting date and are measured at the amounts expected to be paid when the liabilities are settled. Liabilities for non-accumulating sick leave are recognised when the leave is taken and measured at the rates paid or payable.

The liability for employee entitlements is carried at the present value of the estimated future cash flows.

### (R) Leases

Leases in which a significant portion of the risks and rewards of ownership are retained by the lessor are classified as operating leases. Payments made under operating leases (net of any incentives received from the lessor) are charged to profit or loss on a straight line basis over the period of the lease.

### (S) Goods and services tax (GST)

The Statement of Comprehensive Income and Statement of Cash Flows have been prepared on a GST exclusive basis. All items in the Balance Sheet are stated net of GST, with the exception of receivables and payables, which include GST invoiced.

### (T) Rounding of amounts

Amounts in the financial statements have been rounded off in the financial statements to the nearest one thousand dollars.

### 3. NEW ACCOUNTING STANDARDS AND AMENDMENTS

The following standards, amendments and interpretations to existing standards which have been published and are mandatory for the Branch's accounting periods beginning on or after 1 January 2018 have not been early adopted:

- NZ IFRS 9, Financial Instruments effective 1 January 2018. Introduces changes in the classification and measurement of financial assets and liabilities. Not expected to have a material impact on the financial statements.
- On 18 May 2017, after around 20 years of development, the International Accounting Standards Board issued IFRS 17, a new accounting standard for insurance contracts. The New Zealand equivalent, NZ IFRS 17, was adopted by the New Zealand Accounting Standards Board on 10 August 2017. NZ IFRS 17 will be effective for reporting periods beginning on or after 1 January 2021 and will be applicable to general, life and health insurance business. Given the broad scope, complexity and lack of general consensus on the interpretation of some key areas of the standard, the impact of NZ IFRS 17 on the company's financial statements is still being determined; however, significant disclosure changes and

### NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

### 3. New Accounting Standards and Amendments (Continued)

some impact on profit or loss are expected. In particular, NZ IFRS 17 introduces a new general model for measuring and accounting for insurance contracts but permits application of a simplified measurement model if the profit measurement under the simplified model would not materially differ from the general model. The company has initiated a project to assess the impact of this change on both the financial statements and the broader business, with a view to achieving full compliance for the first applicable reporting date, for the year ending 31 December 2021. An initial impact assessment has identified a number of key areas of uncertainty of interpretation of NZ IFRS 17 as well as the potential for changes in interpretation during 2018 as the International Accounting Standards Board progresses its education support for the new standard.

• NZ IFRS 16 was issued during 2016 and will replace existing accounting requirements for leases, including disclosure requirements. Under current requirements, leases are classified based on their nature as either finance leases, which are recognised on the balance sheet, or operating leases, which are not recognised on the balance sheet. The application of NZ IFRS 16 will result in the recognition of all leases on the balance sheet in the form of a right-of-use asset and a corresponding lease liability, except for leases of low value assets and leases with a term of 12 months or less. As a result, the new standard is expected to impact leases which are currently classified by the Group as operating leases; primarily, leases over offices, equipment, and motor vehicles. A reliable estimate of the impact is still being determined.

#### 4. CRITICAL ACCOUNTING ESTIMATES AND JUDGEMENTS

The Branch makes estimates and assumptions in respect of certain key assets and liabilities. Estimates and judgements are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances.

Estimates of the outstanding claims as at 31 December 2017 are the responsibility of Chris Killourhy, Fellow of the New Zealand Society of Actuaries. Estimates of the outstanding claims as at 31 December 2016 are the responsibility of Benoit Laganiere, Fellow of the Institute of Actuaries of Australia.

The actuarial assessments are in accordance with the standards and guidance of the Institute of Actuaries of Australia and New Zealand Society of Actuaries. The Actuary is satisfied with the nature, sufficiency and accuracy of the data used to determine the outstanding claims liability.

The outstanding claims liability is set at a level that is appropriate and sustainable to cover the Branch's obligations after having regard to the prevailing market environment and prudent industry practice.

The key areas in which critical estimates and judgments are applied are described as follows:

#### (A) Outstanding claims provision

The Branch's net outstanding claims provision comprises:

- · the gross central estimate of expected future claims payments;
- · amounts recoverable from reinsurers based on the gross central estimate;
- a reduction to reflect the discount to present value using risk-free rates of return to reflect the time value of money; and
- · a risk margin that reflects the inherent uncertainty in the net discounted central estimate.

A net discounted central estimate is intended to represent the mean of the distribution of the expected future cash flows. As the Branch requires a higher probability that estimates will be adequate over time, a risk margin is added to the net discounted central estimate to determine the outstanding claims provision.

# NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

### 4. Critical Accounting Estimate and Judgements (Countiniued)

### (i) Central estimates

The provision for expected future payments includes those in relation to claims reported but not yet paid; claims incurred but not reported (IBNR); claims incurred but not enough reported (IBNER); and estimated claims handling costs, being the indirect expenses incurred in the settlement of claims.

The estimation of IBNR is generally subject to a greater degree of uncertainty than the estimation of the cost of settling claims already notified to the Branch, where more information about the claims is generally available. Liability and other long tail classes of business, where claims settlement may not happen for many years after the event giving rise to the claim, typically display greater variability between initial estimates and final settlement due to delays in reporting claims, uncertainty in respect of court awards and future claims inflation. Claims in respect of property and other short tail classes are typically reported and settled sooner after the claim event, giving rise to more certainty. The estimation techniques and assumptions used in determining the central estimate are described below.

The Branch's process for establishing the central estimate involves extensive consultation with internal and external actuaries, claims managers, underwriters and other senior management. This process includes half yearly internal claims provisioning committee meetings attended by the senior management and the Appointed Actuary and detailed review by external actuaries at least annually. The risk management procedures related to the actuarial function are explained further in note 5.

The determination of the amounts that the Branch will ultimately pay for claims arising under insurance and reinsurance contracts involves a number of critical assumptions. Some of the uncertainties impacting these assumptions are as follows:

- · changes in patterns of claims incidence, reporting and payment;
- volatility in the estimation of future costs for long tail insurance classes due to the longer period of time that elapses before a definitive determination of the ultimate claims cost can be made;
- · incidence of catastrophic events close to the balance sheet date;
- · changes in the legal environment, including the interpretation of liability laws and the quantum of damages; and
- social and economic trends, for example price and wage inflation and interest rates.

The potential impact of changes in key assumptions used in the determination of the central estimate and the probability of adequacy of the central estimate on the Branch's profit or loss are summarised in note 4(A)(v).

Central estimates for each class of business are determined by reference to a variety of estimation techniques, generally based on a statistical analysis of historical experience which assumes an underlying pattern of claims development and payment. The final selected central estimates are based on a judgmental consideration of the results of each method and qualitative information, for example, the class of business, the maturity of the portfolio and the expected term to settlement of the class. Projections are based on both historical experience and external benchmarks where relevant.

Central estimates are calculated gross of any reinsurance recoveries. A separate estimate is made of the amounts recoverable from reinsurers based on the gross central estimate.

The net central estimate is discounted at risk-free rates of return to reflect the time value of money. Details of the key assumptions applied in the discounting process are summarised in note 4(A)(iv).

### (ii) Assets arising from contracts with reinsurers

Assets arising from contracts with the Branch's reinsurers are determined using the same methods described above. In addition, the recoverability of these assets is assessed at each balance sheet date to ensure that the balances properly reflect the amounts that will ultimately be received, taking into account counterparty credit risk and the contractual terms of the reinsurance contract. Counterparty and credit risk in relation to reinsurance assets is considered in note 5(C)(ii).

## NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

# 4. Critical Accounting Estimate and Judgements (Countiniued)

### (iii) Risk margin

Risk margins are determined by management and are held to mitigate the potential for uncertainty in the central estimate. The determination of the appropriate level of risk margin takes into account similar factors to those used to determine the central estimate, such as:

- change in the mix of business, in particular the mix of short tail and long tail business and the overall weighted average term to settlement;
- prior accident year claims development; and
- the level of uncertainty in the net discounted central estimate due to actuarial estimation, data quality issues, variability of key discount and inflation assumptions and legislative uncertainty.

The variability by class of business uses techniques similar to those used in determining the central estimate. These techniques determine a range of possible outcomes of ultimate payments and assign a likelihood to outcomes at different levels. These techniques use standard statistical distributions, and the measure of variability is referred to as the coefficient of variation.

The appropriate risk margin for two or more classes of business combined is likely to be less than the sum of the risk margins for the individual classes. This reflects the benefit of diversification in general insurance. The statistical measure used to determine diversification is called the correlation. The higher the correlation between two classes of business, the more likely it is that a negative outcome in one class will correspond to a negative outcome in the other class.

The risk margin for the Branch is determined by analysing the variability of each class of business and the correlation between classes of business and divisions. Correlations are determined for aggregations of classes of business. Whilst there are estimation techniques for determining correlations, they are difficult to apply. The correlations adopted by the Branch are normally derived from industry analysis and the judgement of experienced and qualified actuaries.

The probability of adequacy is a statistical measure of the relative adequacy of the outstanding claims provision and is derived from the comparison of the risk margin with the net discounted central estimate. Using a range of outcomes, it allows a determination of the probability of adequacy represented by a risk margin. For example, a 90% probability of adequacy indicates that the outstanding claims provision is expected to be adequate nine times in ten. The appropriate level of risk margin is not determined by reference to a fixed probability of adequacy.

# (iv) Financial assumptions used to determine the outstanding claims provision Discount rates

NZ IFRS 4 Insurance Contracts requires that the outstanding claims provision shall be discounted for the time value of money using risk-free rates that are based on current observable, objective rates that relate to the nature, structure and terms of the future obligations. The standard also states that government bond rates may be an appropriate starting point in determining a risk-free rate. The Branch uses New Zealand discount rates.

The discount rates used in the measurement of outstanding claims and reinsurance recoveries for the succeeding year was 1.86% (2016: 1.96%) and subsequent years were 1.83% - 2.86% (2016: 2.08% - 3.42%). The change has no material impact.

# Weighted average term to settlement

The relevant discount rate is applied to the anticipated cash flow profile of the central estimate, including related reinsurance recoveries, determined by reference to a combination of historical analysis and current expectations of when claims and recoveries will be settled. The weighted average term to settlement of the Branch's claims provision is 1.30 years (2016: 1.86 years).

#### Other Assumptions

Inflation 0.4% (2016:0.4%), Claims expenses ratio 2.99% (2016: 2.7%) of Net discounted outstanding claims.

### NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

### 4. Critical Accounting Estimate and Judgements (Continued)

### (v) Impact of changes in key variables on the outstanding claims provision

The impact of changes in key variables used in the calculation of the outstanding claims provision is summarised in the table below. Each change has been calculated in isolation from the other changes and each change shows the after tax impact on profit assuming that there is no change to any of the other variables.

The sensitivities below assume that all changes directly impact profit after tax. In practice, however, it is likely that if the central estimate was to increase by 5%, at least part of the increase would result in a decrease in the probability of adequacy. Likewise, if the coefficient of variation were to increase by 1%, it is likely that the probability of adequacy would reduce from its current level and that the change would therefore impact the amount of risk margins held rather than net profit after income tax or equity.

The impact of a change in interest rates on profit after tax due to market value movement on fixed interest securities is shown in note 5(D)(ii).

	MOVEMENT IN	FINANCIAL IMP PROFIT (LOS	
	VARIABLE %	2017 \$000's	2016 \$000's
Inflation rates	increase of 1%	(973)	(1,765)
	decrease of 1%	960	1,724
Discount rates	increase of 1%	934	1,663
	decrease of 1%	(966)	(1,733)
Claims expenses ratio	increase of 1%	(1,596)	(2,040)
	decrease of 1%	1,596	2,040
Weighted average term to settlement	+0.5 years	378	1,534
	-0.5 years	(380)	(1,559)

Determined at the Branch level net of reinsurance and taxation

### (B) Liability adequacy test

At each balance sheet date, the adequacy of the unearned premium liability is assessed on a net of reinsurance basis against the present value of the expected future cash flows relating to potential future claims, plus a risk margin to reflect the inherent uncertainty of the central estimate. Future claims are those claims expected to arise from claims events occurring after the balance sheet date. The assessment is carried out using the same methods described in note 4(A) above and 17(B).

### 5. RISK MANAGEMENT

QBE Group's risk management policy, strategy and framework are embedded in the head office and in each of the divisional operations and business units within each of the divisions, ensuring a consistent approach to managing risk across the organisation. The board annually approves a comprehensive risk management strategy (RMS), including a risk appetite statement and a reinsurance management strategy (REMS).

As a member of the QBE Group, the Branch has adopted the risk management policy of QBE Group in New Zealand. The Branch's risk management objectives are to:

<sup>&</sup>lt;sup>1</sup> Net of tax at the Branch's prima facie rate of 28%

#### NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

### 5. Risk Management (Continued)

- · achieve competitive advantage through better understanding the risk environment in which QBE operates;
- · optimise risk and more effectively allocate resources by assessing the balance of risk and reward; and
- · avoid unwelcome surprises by reducing uncertainty and volatility.

It is QBE Group's policy to adopt a rigorous approach to managing risk throughout each of the divisions and business units. Risk management is a continuous process and an integral part of quality business management. QBE Group's approach is to integrate risk management into the broader management processes of the organisation. It is QBE Group's philosophy to ensure that risk management remains embedded in the business and that the risk makers or risk takers are themselves the risk managers. Specifically, the management of risk must occur at each point in the business management cycle.

Risk management is a key part of our governance structure and our strategic and business planning. It underpins the setting of limits and authorities and it is embedded in the monitoring and evaluation of performance. This holistic approach to risk management allows all of the Branch's risks to be managed in an integrated manner.

QBE Group's global risk management framework defines the risks that QBE Group is exposed to and sets out the framework to manage those risks and meet strategic objectives whilst taking into account the creation of value of our shareholders. The framework is made up of complementary elements that are embedded throughout the business management cycle and culture. Key aspects include: governance, risk appetite and tolerance, delegated authorities, risk policies, measurement and modelling, risk and control self-assessment, risk treatment, optimisation and ongoing improvement through management action plans, risk and performance monitoring.

A fundamental part of the Branch's overall risk management strategy is the effective governance and management of the risks that impact the amount, timing and uncertainty of cash flows from insurance contracts. The operating activities of the Branch expose it to risks such as market risk, credit risk insurance risk and liquidity risk. The branch's risk management framework recognises the unpredictability of financial markets and seeks to minimise potential adverse effects on its financial performance. The Branch has established internal controls to manage risk in the key areas of exposure relevant to its business.

The Branch's risk profile is described under the following broad risk categories:

- · Strategic risk
- Insurance risk
- · Credit risk
- · Market risk
- · Liquidity risk
- Operational risk
- · Group risk

Each of these is described more fully in sections (A) to (G) below.

### (A) Strategic risk

Strategic risk refers to the current and prospective impact on earnings and or capital arising from strategic business decisions, implementation of decisions and responsiveness to external change. This includes risks associated with business strategy and change, tax planning, investment strategy and corporate governance. Of particular relevance is capital management risk.

### Capital management risk

The Branch is subject to extensive prudential and other forms of regulation in all jurisdictions in which they conduct business. Prudential regulation is generally designed to protect policyholders. Regulation covers a number of areas including solvency, change in control and capital movement limitations. The regulatory environment in NZ, Australia and overseas continues to evolve in response to economic, political and industry developments. QBE Group works closely with regulators and monitors regulatory developments across its global operations to assess their potential impact on its ability to meet solvency and other requirements.

# NOTES TO THE FINANCIAL STATEMENTS For the year ended 31 December 2017

#### 5. Risk Management (Continued)

### (B) Insurance risk

Insurance risk is the risk of fluctuations in the timing, frequency and severity of insured events and claims settlements, relative to the expectations at the time of underwriting. This includes underwriting, catastrophe,

claims concentration and claims estimation risks. The risks inherent in any single insurance contract are the possibility of the insured event occurring and the uncertainty of the amount of the resulting claim. By the very nature of an insurance contract, these risks are random and unpredictable. In relation to the pricing of individual insurance contracts and the determination of the level of the outstanding claims provision in relation to a portfolio of insurance contracts, the principal risk is that the ultimate claims payments will exceed the carrying amount of the provision established.

Experience shows that the larger the portfolio of similar insurance contracts, the smaller the relative variability around the expected outcome will be. In addition, a more diversified insurance Branch is less likely to be affected by a change in any one specific portfolio. The Branch has developed its underwriting strategy to diversify the type of insurance risks accepted, and where possible, within each of these categories, to achieve a sufficiently large population of risks to reduce the variability of the expected outcome.

QBE Group has established the following protocols to manage its insurance risk across the underwriting, claims and outwards reinsurance.

### (i) Underwriting risks Selection and pricing of risks

Underwriting authority is delegated to experienced underwriters for the forthcoming year following a detailed retrospective and prospective analysis of each class of business as part of the Branch's annual business planning process. Delegated authorities reflect the level of risk which the Branch allows. The authorities include reference to some combination of:

- · return on risk adjusted equity;
- · gross written premium;
- premium per contract;
- sum insured per contract;
- · aggregate exposures per zone;
- probable maximum loss and realistic disaster scenarios (RDS);
- · levels and quality of reinsurance protection;
- · geographic exposures; and/or
- classes of business and types of product that may be written.

Limits in respect of each of the above are set at a portfolio and Branch level and are included within business plans for individual classes of business. They are adjusted to reflect a risk factor in respect of previous underwriting results, the economic environment and other potential drivers of volatility.

Insurance and reinsurance policies are written in accordance with the Branch's management practices and New Zealand regulations taking into account the Branch's risk appetite and tolerance and underwriting standards. Non-standard and long-term policies may only be written if expressly included in the delegated authorities. No individual long-term or non-standard policy is material to the Branch.

Pricing of risks is controlled by the use of in-house pricing models relevant to specific portfolios. Experienced underwriters and actuaries maintain historical pricing and claims analysis for each portfolio and this is combined with a detailed knowledge of the current developments in the respective markets and classes of business.

#### Concentration risk

The Branch's exposure to concentrations of insurance risk is mitigated by a portfolio diversified by multiple classes of business. Product diversification is achieved through a strategy of developing strong underwriting skills in a wide variety of classes of business.

#### NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

#### 5. Risk Management (Continued)

The Branch has potential exposure to catastrophe losses. The Branch undertakes probable maximum loss modelling to ensure the Branch operates within its tolerance to concentration risk.

#### (ii) Claims management and claims estimation risks

The Branch's approach to determining the outstanding claims provision and the related sensitivities are set out in note 4. The Branch seeks to ensure the adequacy of its outstanding claims provision by reference to the following controls:

- experienced claims managers work with underwriters on coverage issues and operate within the levels of authority delegated to them in respect of the settlement of claims;
- processes exist to ensure that all claims advices are captured and updated on a timely basis with a realistic assessment of the ultimate claims cost;
- initial IBNR estimates are set by experienced internal actuaries in conjunction with the local product managers
  and underwriters for each class of business in each business unit. The valuation of the central estimate is
  primarily performed by actuaries who are not involved in the pricing function and who therefore provide an
  independent assessment;
- the determination of the risk margin is performed by senior management and the Board with input from the Appointed Actuary;
- the aggregate outstanding claims provision is assessed in a series of quarterly internal claims review meetings
  which are attended by senior management and the Appointed Actuary in order to ensure consistency of
  provisioning practices across all countries; and
- · the Branch's central estimate is reviewed annually.

Despite the rigour involved in the establishment and review of the outstanding claims provision, the provision is subject to significant uncertainty for the reasons provided in note 4.

### (iii) Reinsurance

Reinsurance is purchased to make the Branch's results more predictable by reducing the effect that individual large claims, and catastrophic events that lead to multiple claims, have on results. The majority of reinsurance will be arranged on a non-proportional excess of loss treaty basis. Facultative cover will only be used where the inclusion of certain risks in the treaty would have an undue effect on the treaty or where there was a specific exposure that could not be covered under the treaty.

The Branch's strategy in respect of the selection, approval and monitoring or reinsurance arrangements is addressed by the following protocols:

- Placement of appropriate treaty or facultative reinsurance is governed by the Branch's reinsurance management strategy and Group committee guidelines.
- Reinsurance arrangements are regularly reassessed to determine their effectiveness based on current exposures, historic losses and potential future losses based on realistic disaster scenarios.

The quality of the Branch's exposure to reinsurance counterparties is actively monitored at Branch level with reference to detailed counterparty analysis prepared using age of balance and rating agency analysis.

#### (C) Credit risk

Credit risk is the risk of default by transactional counterparties as well as the loss of value of assets due to deterioration in credit quality. Exposure to credit risk results from financial transactions with securities issuers, debtors, brokers, policyholders and reinsurers.

The Branch's credit risk arises mainly from investment and reinsurance protection activities. The following policies and procedures are in place to mitigate the Branch's exposure to credit risk:

### NOTES TO THE FINANCIAL STATEMENTS For the year ended 31 December 2017

### 5. Risk Management (Continued)

- A QBE Group-wide investment credit risk policy is in place which defines what constitutes credit risk for QBE Group and establishes tolerance levels. Compliance with the policy is monitored and exposures and breaches are reported to the QBE Group investment committee.
- Net exposure limits are set for each counterparty or group of counterparties in relation to investments, cash deposits and forward foreign exchange exposures. The policy also sets out minimum credit ratings for investments.
- QBE Group has strict guidelines covering the limits and terms of net open derivative positions and the
  counterparties with which the Branch may transact. The Branch does not expect any investment counterparties
  to fail to meet their obligations given their strong credit ratings and therefore does not require collateral or other
  security to support derivatives.
- Credit risk in respect of premium debtors and reinsurance receivables is actively monitored. Strict controls are
  maintained over counterparty exposures. Business is transacted with counterparties that have a strong credit
  rating and concentration of risk is managed by adherence to counterparty limits. The provision for impairment
  is formally assessed by management at least four times a year.

### (i) Credit quality of financial assets

The following tables provide information regarding the Branch's aggregate credit risk exposure at the balance sheet date in respect of the major classes of financial assets. The reinsurance counterparty credit risk is further disclosed under note 5(ii). Trade and other receivables are excluded from this analysis on the basis that they generally cannot be rated as the receivables are due from numerous individual companies. The analysis classifies the assets according to Moody's counterparty credit ratings. Aaa is the highest possible rating.

		CREDIT RATING	3	
	Aaa \$000's	Aa \$000's	A \$000's	TOTAL \$000's

Other debtors	21,077	-	-	-	-	21,077

### (ii) Reinsurance counterparty credit risk

The Branch's objective is to maximise placement of reinsurance with highly rated counterparties. Concentration of risk with reinsurance counterparties is monitored strictly and regularly by the divisional security committee and is controlled by reference to the following protocols:

- Treaty or facultative reinsurance is placed in accordance with the requirements of the Branch's reinsurance management strategy and Group security committee guidelines.
- Reinsurance arrangements are regularly reassessed to determine their effectiveness based on current exposures, historic losses and potential future losses and the Branch's maximum event retention.
- Exposure to reinsurance counterparties and the credit quality of those counterparties is actively monitored.

The following table provides information about the quality of the Branch's credit risk exposure in respect of undiscounted reinsurance and other recoveries on outstanding claims at the balance sheet date. The analysis classifies the assets according to Standard and Poors counterparty ratings. AAA is the highest possible rating.

	_	CREDIT RATING					
		AAA	AA	Α	888	NOT RATED	TOTAL
		\$000's	\$000's	\$000's \$000'	\$000's \$000's	\$000's	\$000's

#### NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

### 5. Risk Management (Continued)

### (D) Market risk

Market risk is the risk of variability in the value of, and returns on, investments and the risk associated with variability of interest rates, foreign exchange rates and economy-wide inflation on both assets and liabilities, excluding insurance liabilities.

Market risk comprises three types of risk: currency risk (due to fluctuations in foreign exchange rates); interest rate risk (due to fluctuations in market prices). Within each of these categories, risks are evaluated before considering the effect of mitigating controls. The existence and effectiveness of such mitigating controls are then measured to ensure that residual risks are managed within the Branch's risk appetite and tolerance.

### (i) Currency risk

The Branch's exposure to currency risk generally arises as a result of the translation of foreign currency amounts back to the functional currency of the Branch. There is no material currency risk exposure to the Branch.

#### (ii) Interest rate risk

Financial instruments with floating interest rate expose the Branch to cash flow interest rate risk, whereas fixed interest rate instruments expose the Branch to fair value interest rate risk.

QBE Group's risk management approach is to minimise interest rate risk by actively managing investment portfolios to achieve a balance between cash flow interest rate risk and fair value interest rate risk. The Branch invests in high quality, liquid interest-bearing securities and cash and actively manages the duration of the fixed interest portfolio.

The claims provision is discounted to present value by reference to risk-free interest rates. The Branch is therefore exposed to potential underwriting result volatility as a result of interest rate movements. In practice, however, an increase or decrease in interest rates is normally offset by a corresponding increase or decrease in inflation. Details are provided in note 4(A)(v). QBE Group has a policy of maintaining a relatively short duration for assets backing insurance liabilities in order to minimise any further potential volatility affecting insurance profit.

The contractual maturity profile of the Branch's interest-bearing financial assets and hence its exposure to interest rate risk, and the effective weighted average interest rate for interest-bearing financial assets is analysed in the table below. The table includes investments at the maturity date of the security.

### NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

### 5. Risk Management (Continued)

INTEREST - BEARING FINANCIAL ASSETS MATURING IN

		317111	ERESI - BEA	KING FINANC	HAL HOOE IS	WATORING	114
		1 YEAR OR LESS	1 TO 2 YEARS	2 TO 3 YEARS	3 TO 4 YEARS	4 TO 5 YEARS	TOTAL

Floating rate	\$000's	57,786	25,142	5,077		_	88,005
Weighted average interest rate	%	1.98	2.4	2.63	-	-	2.24
At 31 December 2016							
Fixed rate Weighted	\$000's	43,311	101,196	76,351	15,189	44,768	280,815
average interest rate	%	2.51	3.21	2.74	3.38	3.39	2.99
Floating rate Weighted	\$000's	68,758	33,188	30,087	5,019	-	137,052
average interest rate	%	1.88	2.89	2.90	3.17	_	2.44

All financial assets are measured at fair value through profit or loss. Movements in interest rates impact the value of interest-bearing financial assets and therefore impact reported profit after tax. The impact of a 0.5% increase or decrease in interest rates on interest-bearing financial assets owned by the Branch at the balance sheet date is shown in the table below.

		PROFIT/(LOSS)	& EQUITY1
	SENSITIVITY	2017	2016
	%	\$000's	\$000's
Interest rate movement – interest-bearing financial assets	+0.50	(3,270)	(2,819)
morodicato meroment amerodicating merodicate	-0.50	3,270	2,819

Net of tax at the Branch's prima facie rate of 28%

## (iii) Price risk

Price risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate or currency risk), whether those changes are caused by factors specific to the individual financial instrument or its issuer, or factors affecting all similar financial instruments traded on the market.

At 31 December 2017, the Branch did not hold any investments in listed equities (2016: nil). The Branch is exposed to price risk on its investment in corporate fixed interest securities. All corporate securities are measured at fair value through profit or loss. Movements in credit spreads impact the value of corporate fixed interest and floating rate securities and therefore impact reported profit after tax. The profit/(loss) impact in \$000's of a plus or minus 0.5% change in credit spreads is (\$1,272) - \$1,266. 2016 (\$1,639) - \$1,639.

#### (E) Liquidity risk

Liquidity risk is the risk of insufficient liquid assets to meet liabilities as they fall due to policyholders and creditors.

### NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

#### 5. Risk Management (Continued)

This includes the risk associated with asset liability management. The key objective of the Branch's asset and liability management strategy is to ensure sufficient liquidity is maintained at all times to meet the Branch's obligations including its settlement of insurance liabilities and, within these parameters, to optimise investment returns for the Parent.

Liquidity must be sufficient to meet both planned and unplanned cash requirements. The Branch is exposed to liquidity risk mainly through its obligations to make payments in relation to its insurance activities.

In addition to treasury cash held for working capital requirements, and in accordance with the Branch's liquidity policy, a minimum percentage of investments and cash is held in liquid, short-term money market securities to ensure that there are sufficient liquid funds available to meet insurance obligations. The Branch has a strong liquidity position. The maturity of the Branch's interest-bearing financial assets is included in note 5(D)(ii).

The Branch may limit the risk of liquidity shortfalls resulting from mismatches in the timing of claims payments and receipts of claims recoveries by negotiating cash call clauses in reinsurance contracts and seeking accelerated settlements for large reinsurance recoveries.

The Branch has no significant concentration of liquidity risk.

The maturity profile of the Branch's net outstanding claims provision is analysed in note 18(B). All other financial liabilities have a contractual maturity profile of 1 year or less.

### (F) Operational risk

Operational risk is the risk of financial loss resulting from inadequate or failed internal processes, people and systems or from external events (including legal risk). The Branch manages operational risk within the same robust risk management framework as its other risks. The risk assessment and monitoring framework involves on-going:

- identification and review of the key risks to the Branch;
- · definition of the acceptable level of risk appetite and tolerance;
- assessment of those risks throughout the Branch in terms of the acceptable level of risk (risk tolerance) and the
  residual risk remaining after having considered risk treatment;
- assessment of whether each risk is within the acceptable level of risk, or requires appropriate action be taken to mitigate any excess risk;
- · transparent monitoring and reporting of risk management related matters on a timely basis; and
- · alignment of internal audit programs with risks.

One of the cornerstones of the Branch's risk management framework is the recruitment and retention of high quality people who are entrusted with appropriate levels of autonomy within the parameters of disciplined risk management practices.

The Branch operates a system of delegated authorities based on expertise and proven performance, and compliance is closely monitored. Other controls include effective segregation of duties, access controls and authorisation and reconciliation procedures.

(G) Group risk

Group risk is the risk to the Branch arising specifically from being part of the Group, including the financial impact and loss of support from the parent company.

For the year ended 31 December 2017

### 8. CLAIMS INCURRED

### (A) Claims analysis

	2017 \$000's	2016 \$000's
Gross claims incurred and related expenses		
Direct	143,680	563,453
Reinsurance and other recoveries		
Direct	(43,525)	(444,600)
Net claims incurred	100,155	118,853

#### (B) Net claims incurred

Current year's claims relate to risks borne in the current reporting year. Prior year claims relate to a reassessment of the risks borne in all previous reporting years and include releases of risk margins as claims are paid.

		2017			2016	
	CURRENT YEAR	PRIOR YEARS	TOTAL	CURRENT YEAR	PRIOR YEARS	TOTAL
	\$000's	\$000's	\$000's	\$000's	\$000's	\$000's
Gross claims incurred and related expenses						
Undiscounted	206,161	(80,692)	125,469	584,864	11,739	596,603
Discount	(3,348)	21,559	18,211	(37,856)	4,706	(33,150)
Gross claims incurred	202,813	¹(59,133)	143,680	547,008	16,445	563,453
Reinsurance and other						
recoveries						
Undiscounted	85,388	(53,669)	31,719	444,413	28,119	472,532

### NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

### 9. INCOME TAX EXPENSE

## Reconciliation of prima facie tax to income tax expense

	2017	2016
	\$000's	\$000's
Profit before income tax	44,865	9,406
Prima facie tax payable at 28%	12,562	2,634
Tax effect of non-temporary differences:		ŕ
Non-allowable expenses and non-taxable income	115	67
Prima facie tax adjusted for non-temporary differences	12,677	2,701
Over provision in prior years	(84)	(358)
Income tax expense	12,593	2,343
Analysed as follows:	***************************************	
Current tax	11,536	1,649
Deferred tax	1,057	694
	12,593	2,343
Deferred tax expense comprises:		
Deferred tax assets recognised in profit or loss	(92)	(512)
Deferred tax liabilities recognised in profit or loss	1,149	1,206
	1,057	694

### 10. CASH AND CASH EQUIVALENTS

	2017	2016
	\$000's	\$000's
Cash at bank and on hand	7,312	25,407

Amounts in cash and cash equivalents are the same as those included in the cash flow statement.

Cash and cash equivalents include balances readily convertible to cash. All balances are held to service normal operational requirements.

# Reconciliation of profit after income tax to net cash flows from operating activities

	2017	2016
	\$000's	\$000's
Profit after income tax	32,272	7,063
Depreciation of property, plant and equipment	544	609
Fair value movement of financial assets	(628)	2.376
Loss on sale of plant and equipment	37	2
Movement in trade and other payables	6,507	4,230
Movement in trade and other receivables	(18,733)	(16,178)
Movement in net outstanding claims	(28,120)	34,597
Movement in unearned premiums	27,838	13,734
Movement in deferred insurance costs	(3,921)	3,688
Movement in tax balances	13,105	(5,575)
Movement in head office account	(2,547)	(5,655)
Net cash flows from operating activities	26,354	38,891

#### NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

#### 11. INVESTMENTS

	2017 \$000's	2016 \$000's
Fixed interest rate		<del> </del>
Government bonds	67,951	66,136
Corporate bonds	291,671	214,678
	359,622	280,814
Floating interest rate		
Short term money	39,479	43,352
Floating rate notes	41,213	68,294
	80,692	111,646
Total investments	440,314	392,460
Amounts maturing within 12 months	132,723	86,661
Amounts maturing in greater than 12 months	307,591	305,799
Total investments	440,314	392,460

#### Valuation of investments

All investments are initially recorded at fair value and are subsequently remeasured to fair value at each balance sheet date.

#### Short-term money

Term deposits are valued at par plus accrued interest and are classified as level 1. Other short-term money (bank bills, certificates of deposit, treasury bills and other short-term instruments) are priced using interest rates and yield curves observable at commonly quoted intervals.

### Government bonds and corporate bonds

Bonds which are traded in active markets and have quoted prices from external data providers are classified as level 1. Bonds which are not traded in active markets are priced using broker quotes, using comparable prices for similar instruments or using pricing techniques set by local regulators or exchanges.

#### Fair value hierarchy

The investments of the Branch are disclosed in the table below using a fair value hierarchy which reflects the significance of inputs into the determination of fair value as follows:

Level 1: Valuation is based on quoted prices in active markets for the same instruments.

Level 2: Valuation is based on quoted prices in active markets for similar assets or liabilities or other valuation techniques for which all significant inputs are based on observable market data, for example, consensus price using broker quotes and valuation model with observable inputs.

Level 3: Valuation techniques are applied for which any significant input is not based on observable market data. There were no level 3 investments.

Amounts recognised in profit or loss	(307)	(240)
At 31 December	262	569

#### (B) Fair value

Due to the short-term nature of these receivables, their carrying value is assumed to approximate their fair value.

#### (C) Risk

The maximum exposure to credit risk at the reporting date is the fair value of each class of receivables. No receivables are pledged by the Branch as collateral for liabilities or contingent liabilities. Information on the ageing and credit rating of balances in the table above, where relevant, is included in note 5(C). Note 5 also provides more information on the risk management policies of the Branch.

Payable within 12 months Payable in greater than 12 months	65,861	56,744
Trade and other payables	65,861	56.744

#### 17. UNEARNED PREMIUM

### (A) Unearned premium

	2017 \$000's	2016 \$000's
At 1 January	209,736	196,002
Intergroup transfer	(874)	.00,002
Deferral of premium on contracts written in the period	227,997	202,091
Earning of premium written in previous periods	(199,285)	(188,357)
At 31 December	237,574	209,736
To be earned within 12 months	229,150	200,166
To be earned in greater than 12 months	8,424	9.570
Unearned premium	237,574	209,736

## (B) Liability adequacy test

The probability of adequacy of the unearned premium liability differs from the probability of adequacy adopted in determining the outstanding claims provision. The reason for the difference is that the former is a benchmark used only to test the sufficiency of net unearned premium liabilities whereas the latter is a measure of the adequacy of the outstanding claims provision actually carried by the Branch.

NZ IFRS requires the inclusion of a risk margin in insurance liabilities, but does not prescribe a minimum level of margin. Whilst there is established practice in the calculation of the probability of adequacy of the outstanding claims provisions, no such guidance exists in respect of the level of risk margin to be used in determining the adequacy of net premium liabilities. The Branch has adopted a risk margin of 11% (2016: 8.7%) for premium liabilities, for the purposes of the liability adequacy test to produce a 75% probability of adequacy in respect of total insurance liabilities. The 75% basis is a recognised industry benchmark in New Zealand and Australia, being the minimum probability of adequacy required for Australian licensed insurers by APRA.

The application of the liability adequacy test in respect of net unearned premium liabilities identified a surplus at 31 December 2017 and 31 December 2016.

The weighted average term to settlement of the claims provision is included in note 4(A)(iv).

## NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

### 18. Outstanding Claims (Continued)

### (C) Risk margin

The process used to determine the risk margin is explained in note 4(A)(iii) and details of the risk-free discount rates adopted are set out in note 4(A)(iv).

The risk margin included in net outstanding claims is 22% (2016: 18%) of the central estimate. Assumptions regarding uncertainty for each business class were applied to the central estimates, allowing for diversification in order to arrive at an overall position, which is intended to have a probability of adequacy greater than 80% (2016: greater than 80%).

## NOTES TO THE FINANCIAL STATEMENTS

For the year ended 31 December 2017

#### 19. SOLVENCY

On 18 December 2015 the Branch was granted a full licence under the Insurance (Prudential Supervision) Act 2010 ("the Act"). As the Branch is a branch of an overseas insurer it is exempt under the Act from complying with the Solvency Standard for Non-Life Insurance Business subject to the condition that the Company meets the equivalent Australian non-Life solvency standard being Australian APRA requirements.

The table below discloses the solvency coverage for QBE Insurance (Australia) Limited which includes the Branch as calculated under the Australian APRA requirements.

	2017 AUD\$000's	2016 AUD\$000's
APRA capital base APRA prescribed capital amount	2,699,561 1,574,206	2,615,195 1,553,867
Capital surplus Solvency coverage	1,125,355 1.71	1,061,328 1.68

## 20. CAPITAL MANAGEMENT AND HEAD OFFICE ACCOUNT

The Branch's objective when managing capital is to meet the solvency requirements and financial strength rating of the parent company.

Local management monitor key financial parameters to safeguard the Branch's ability to continue as a going concern and provide financial returns for the shareholder. The capital of the Branch comprises the Head Office account which consists of retained earnings and current account transactions between the Branch and Head Office. Current transactions with the Head Office include reinsurance, head office charges and other expenses which are settled regularly on a net basis.

## 28. EVENTS OCCURRING AFTER REPORTING DATE

At the date of this report, no matter or circumstance has arisen since 31 December 2017 that has significantly affected, or may significantly affect the financial statements.

QBE Insurance (Australia) Limited 78 003 191 035 Level 5, 2 Park St. Sydney NSW 2000 GPO Box 4229 Sydney NSW 2001 Telephone: (02) 9375

19 April 2018

Mr Terry Lawrence Chief Financial Officer Level 9, AMP Centre 29 Customs Street West Auckland

Dear Mr Lawrence

Re: QBE New Zealand Operations Actuarial Report at 31 December 2017.

Section 77 and 78 of the Insurance (Prudential Supervision) Act 2010 requires a licensed insurer to ensure the actuarial information included in the financial statements has been reviewed by the insurer's Appointed Actuary. As the Appointed Actuary for QBE New Zealand (QBENZ), I, Chris Killourhy have conducted this review for QBENZ's financial statements for the period ending 31 December 2017.

This review involved ascertaining whether actuarial information used in the preparation of financial statements has applied appropriately. No limitations were placed on me in conducting this review, and all information requested has been made available to me.

For the purpose of this review, actuarial information includes

- · Outstanding claims liabilities
- · Premium Liabilities
- Application of the Liability Adequacy Test
- Deferred Acquisition Costs.

I am an employee of QBE Management Services (QMS), which is a related company to QBENZ in that both companies are fully owned by QBE Insurance Group. In addition to this, I held equity positions (current or deferred) in QBE Insurance Group securities at the date of this report. This holding is an immaterial proportion of the total shares issued by QBE.

From my review, it is my opinion that

- the actuarial information included in QBENZ's financial statements has been appropriately included;
- the actuarial information used to prepare the financial statements has been appropriately used; and
- it is understood that QBENZ was granted exemption from complying with the RBNZ solvency standards for non-life insurance business under Section 59 of the Insurance Act. QBENZ is a branch of QBE Insurance (Australia) Limited (QIA) which is an APRA regulated entity. QBENZ is therefore dependent on QIA's capital surplus to remain solvent under most adverse scenarios developed as part of QIA's capital management plan.

Yours sincerely,

Chris Killourhy

New Zealand Appointed Actuary of QBE Insurance (Australia) Limited Accredited Member of the Institute of Actuaries of Australia
