Returns (%) for the December 2021 quarter

Market Commentary

In many respects, market performance in the final quarter of the year was a reversal of what occurred in the previous quarter.

For global share markets it was a game of two halves: the losses experienced in September were quickly recovered and markets made additional gains during October.

There have been many simmering concerns throughout the year, the largest of which has been rising COVID case numbers. The October rally may have been reflective of investors making peace with the prevalence of the virus and having faith in the world response.

Of course, this rally was also on the back of encouraging economic data. US Corporate earnings in particular have become increasingly encouraging over the course of the year (see chart alongside).

Concerns about the US Federal Reserve’s tapering programme similarly appear to have calmed, in no small part due to effective communication by the Fed on this matter. Biden’s Infrastructure Investment and Jobs Act, which authorises \$1.2 trillion in total spending, passed smoothly through the US houses in the second half of the year and was signed into law on November 15th.

By the time November started, markets had essentially reached their peak and have remained relatively level since. The UK saw a sharp sell-off during November, which was

attributed to the Omicron variant, but this was quickly recouped as initial data began to look optimistic.

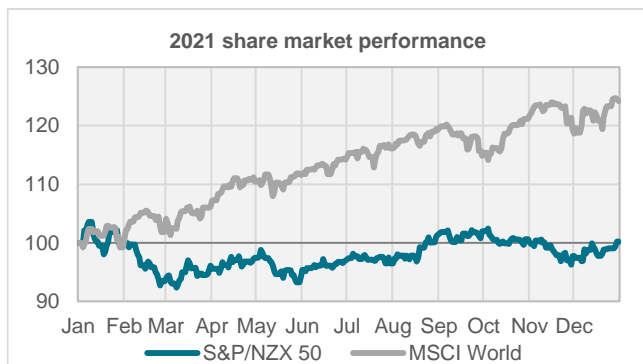

European share markets were robust during the quarter. The overall resilience of European economies went a long way to offset concern about the Omicron variant and the subsequent introduction of restrictions concerning travel and hospitality.

Germany saw a change of leaders late in the year, with Olaf Scholz of the social democrat party replacing long-time Chancellor Angela Merkel. Germany was one of the weaker markets, returning just 2.8% for the quarter compared to the broader, European return of 6.5%.

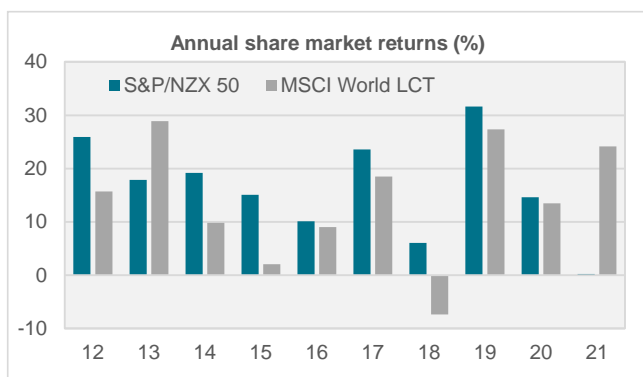

Overall, the US was one of the strongest markets this quarter: the return according to MSCI was 10.0%. This return was buoyed to a large extent by the technology sector to which it is overweight.

New Zealand, in a now-familiar pattern, was a laggard during the final quarter of the year. With a return of -1.7% it was one of the few developed markets to lose value. The difference in fortunes between the New Zealand and other share markets has become stark. The following chart (with both series shown rebased to 100 and ignoring currency impacts) shows the severity of this over the past year.

This reversal marks the end of a long trend of the New Zealand market outperforming world markets more broadly. The following chart shows calendar year performance over recent years. The last year in which the New Zealand market was outperformed by the MSCI World Index was 2013. Over the last ten years, the average return from the New Zealand market has been 16.1% per annum, compared to 13.6% from other developed markets.

Like New Zealand, many emerging share markets have also had a mediocre quarter, investors preferring the safety of larger markets such as the US to generate their returns.

The strongest emerging market return was Czechia (up 12.2%) while China was among the weakest of emerging markets (down 6.2%). China, like many other countries, has suffered due to fears of lockdown restrictions following the arrival of Omicron.

Turning to fixed interest markets, globally the return on offer was small. Portfolios continued to suffer capital losses as interest rates ticked up across most markets. This was after the chair of the Federal Reserve adopted a more hawkish tone to his statements, acknowledging the possibility of an acceleration in the US tapering programme as well as the possibility that the so-called “transitory” inflation becomes a more prolonged affair.

US credit spreads tightened over the December quarter, meaning that investors became more willing to take on the

risk associated with credit and leading to a boost in returns for high yield securities.

While the 5-year US treasury yield rose 28 bps to 1.26%, this was less dramatic than the New Zealand movement. The equivalent movement on 5-year Government stock in New Zealand was 67 bps, finishing the quarter at 2.19%. Most of this increase took place during October, following an OCR hike to 0.50%. This was accompanied by the New Zealand Reserve Bank predicting more aggressive tightening of its monetary policy, forecasting that the OCR would reach 2.5% by 2023.

The OCR was increased a further 0.25% in November to reach 0.75% by the year’s end.

Bond investors have been bruised over the past year and the prospect for further losses has made the sector look distinctively unpalatable. We have, of course, the potential for higher running yields in future but this can only come at the cost of further capital losses in the shorter term.

It has been important in recent months for institutional investors to remember the role that bonds play in a diversified portfolio and the potential to provide return when equity market performance is weak.

Looking ahead, inflation remains the chief uncertainty. So far, the stretch of heightened inflation has persisted in New Zealand and in many other countries is running at the highest level seen in decades. Nevertheless, opinion remains firmly divided on whether it can still be classed as transitory. The level of inflation in the coming year will affect the actions of reserve banks as well as the relative appeal of certain asset classes or stocks that, for example, have enough pricing power to maintain their profits in a real sense.

KiwiSaver

In typical risk-on fashion, the KiwiSaver funds with the most exposure to shares and other growth assets have had the best quarter. The average return for growth funds was 3.4% compared with 0.6% for conservative funds.

We have already observed that investors in global assets have outperformed their domestic counterparts. In a similar vein, those KiwiSaver providers with higher global exposure have been the ones to have performed the best. The best example of this is the Kiwi Wealth Scheme, which achieved a return of 6.1% for its Growth Fund.

Following the default provider review, the new default funds have commenced this quarter. All of the default providers have designed new products to provide a competitive fee to members. Default funds now allocate between 50% and 60% to growth assets, compared to the previous default positioning of around 20% growth allocation.

– William Nelson

Notes:

- Relative outperformance may be due to the different nature of the fund rather than to superior skill. Past performance is no guarantee of future performance.
- Where we consider the funds have reasonably similar mandates, we group the funds and rank the performance. Differences in style and mandates will have an impact on returns.
- KiwiSaver fund returns are shown gross of tax and net of fees. All other fund returns are shown gross of tax and fees.
- KiwiSaver funds are grouped based on benchmark growth asset allocation. Actual asset allocation may differ from this.
- Tracking error is the standard deviation of value added. Information Ratio (IR) is value added divided by tracking error and is therefore a risk-adjusted measure of performance.
- Returns having a New Zealand equity or property component are shown inclusive of imputation credits, which are not available to all investors.
- FUM (funds under management) relates to the size of the locally-domiciled collective investment vehicle. It does not include any overseas funds managed in the same strategy. Where single-manager strategies form part of a multi-manager fund, we show FUM for both separately even if there is inter-funding.
- The numbers shown are in some cases gross equivalents of the net returns achieved by the manager. Consequently, for a tax-exempt investor, returns realised may be different from those shown above.
- The index applied to calculate information ratios is not in all cases be the benchmark adopted by the manager for the fund.
- Global share results are on an unhedged basis. In some instances, hedging the currency is integral to the management of the fund and the client will not experience the results shown.
- AMPC Global Listed Infrastructure Fund was 139% hedged prior to June 2015.
- Russell Global Infrastructure is a blend of the AUD hedged fund prior to 1 December 2017 and NZD hedged fund post 1 December 2017.
- In October 2020, ANZI appointed Northern Trust as its new sub-manager for the two global bond funds and one global equity fund previously managed by Vanguard.

KiwiSaver Results – Return and Risk (after fees, before tax)

About Melville Jessup Weaver

Melville Jessup Weaver is a New Zealand firm of consulting actuaries. The areas in which we provide advice include superannuation, employee benefits, life insurance, general insurance, health insurance, investment consulting, accident insurance and information technology. The firm, established in 1992, has offices in Auckland and Wellington. The firm is an alliance partner of Willis Towers Watson, a leading global professional services company that helps organisations improve performance through effective people, risk, and financial management. The company offers solutions in the areas of employee benefits, talent management, rewards, and risk and capital management. Willis Towers Watson has 39,000 associates in 120 countries around the world and is located on the web at willistowerswatson.com.

Investment consulting services:

- Establish investment objectives.
- Determine long-term investment strategies.
- Determine the optimum investment manager configuration.
- Provide quantitative and qualitative analysis of investment performance.
- Asset/liability modelling.
- Performance monitoring against investment objectives and competitors.
- Manager research and selection.

Melville Jessup Weaver has taken every care in preparing this survey. However, we are not able to guarantee the accuracy of the information and strongly recommend that appropriate professional advice be obtained before any investment activity is undertaken. Manager performance data has been obtained directly from the investment managers themselves and market index data has been derived from publicly available sources. The contents of this investment survey may be reproduced, provided Melville Jessup Weaver is acknowledged as the source.

This document may be updated as and when information is made available after publication. For the latest version, please visit [our website](#).
